Additional run time estimates can be furnished on request for specific furnace units due to varying power draw requirements.

Furnace Mate is not intended for geothermal or electric furnaces.

\*Run time based on standard 85,000 - 100,000 BTU natural gas or propane residential furnace. Will vary depending on motor size.

The Sentinel Furnace Mate is designed to keep gas, oil and propane furnaces running in the event of a power failure. The Sentinel Mate meets the stringent specifications and power requirements of most furnaces. Once the unit is assembled and resting on the floor or mounted on the wall, the installation is as easy as wiring the Mate into the breaker panel, then wiring the furnace to the Mate. The Furnace Mate is pollution, noise, and service free. The Mate Supply's pure sine wave power output, one hundred percent safe for all control and ignition circuitry.

- Supports up to 3/4hp motor
- Wires directly into furnace power circuit
- Fully automatic operation
- Easy to read digital status display
- Power switch
- 18 hours of backup\*
- Recharges completely in 20 hours
- Can be floor or wall mounted
- Run time easily expanded easily by adding Sentinel Mate Expansion SEN-MATE-EXP
- One year warranty
